## THE 1985 QUANTUM

The new Quantum Wagon is truly an affordable European family wagon destined to please both driver and passengers alike. It combines sedan-like comforts and conveniences with the practicality, spaciousness and versatility that only a wagon can deliver.

In the classic grand touring tradition, the Quantum GL Sedan has it all. Its advanced technology, responsive performance and exceptional high level of standard equipment make it an outstanding value among touring sedans.

Both the Quantum Wagon and the Quantum GL Sedan sport an uncanny agility on even the most winding roads. And both boast the ability to glide majestically over superhighways for hours on end.

In an era of automotive gadgetry and talking automobiles, the Quantum is content to let its heritage of German engineering, overall performance and superior quality speak for itself.

Although the 1985 Quantum is new, the philosophy upon which it was built goes back to the very first Volkswagen Squareback introduced in America. The Squareback astonished the automotive world with its efficiency, reliability and common sense. It taught America that sophisticated engineering and value need not be mutually exclusive. And it showed that a car was meant to last longer than one or two model years.

### We still travel our own road

Today, we still design these basic virtues into every Volkswagen we build. And we still refuse to follow popular trends.

We demand that the laws of aerodynamics take precedence over current design fads. We believe in an evolution of excellence, the continual process of improvement and refinement in the pursuit of perfection. We insist on the strictest quality control, with the result that every part of every Volkswagen undergoes several inspections by both man

and computer. And, although we employ the latest technology in our manufacturing process, we believe in traditional craftsmanship, in artisans who maintain standards of pride and dedication no machine can ever match.

### A passion for perfection

Our German engineers impart their own unabashed passion for engineering excellence and overall performance into every Volkswagen they design.

They employ advanced technology instead of automotive gimmickry. They provide outstanding efficiency without compromising stanning

performance. And they engineer every Volkswagen with such precision that virtually every driving command can be executed swiftly.

As a result, you do not drive a car. You have the unique pleasure of driving a Volkswagen.
