Puma

DRIVER'S DREAM

INSPIRED ENGINEERING

Sleek, muscular lines and big tyres on chunky alloy wheels give Puma an athletic, purposeful stance.

Everywhere, thoughtful touches, like the distinctive circular projection headlamps and the beautifully machined aluminium gear lever knob, promise capability and performance.

But the heart of a true coupé is its engine. With Puma you can choose its 1.7 litre, 92 kW (125 PS) Zetec SE engine, with fully Variable Cam Timing (VCT), a first for a car of this class.

EVEN BEFORE YOU START THE ENGINE IT GETS THE ADRENALIN FLOWING

You know after 8.8 seconds that this is a very special piece of engine technology. That's how long it takes to get to 60 mph.

We've tuned the VCT to deliver over 85 per cent of peak torque from just 1500 revs. For you, this means a potent, free-revving engine with eager acceleration through the range.

Alternatively, you can choose Puma's lively 1.4 litre, 66 kW (90 PS) Zetec SE engine. Built using light metal alloy, it is compact and lightweight for maximum engine efficiency, yet it retains much of the agility of the 1.7 litre engine.

Whatever your choice, you can be sure of an exhilarating driving experience.

Model shown features optional Luxury Pack.

EVOCATIVE DESIGN

A lot of thought has gone into Puma's interior. It's there in the evocative aluminium finish, the tactile aluminium gear shift, in the contoured sports seats, the clarity of the white sports dials, the feel of the chunky leather steering wheel.

There's power height adjustment on the driver's seat for your ideal driving position. And there's room for two rear passengers and plenty of luggage.

† All figures in L/100 km (mpg) are from officially approved tests under the Passenger Car Fuel Consumption Order 1983 and in accordance with EEC Directive 93/116/EC. *In 4th gear

The Government fuel consumption test figures shown in the chart do not express or imply any guarantee of the fuel consumption of a car of the class in question. See back cover.

Note:

Urban

An engine started from cold in laboratory conditions operated at varying speeds, maximum 31 mph, average 12 mph over a theoretical distance of 4 km (2.5 miles).

Extra Urban

Conducted immediately after the urban cycle, it consists of half steady speed driving and half varying speed driving, maximum 75 mph over a distance of 7 km (4.3 miles).

Combined

This is an average of the two parts of the test, weighted by the distances covered in each part.

The Government fuel figures do not express or imply any guarantee of the fuel consumption of any particular car. The cars themselves have not been tested and there are inevitably differences between individual cars of the same model. In addition, a car may incorporate particular modifications.

Furthermore, the driver's style and road and traffic conditions, as well as the extent to which the car has been driven and the standard of maintenance, will affect its fuel consumption.

Insurance Groups are only as recommended by the Association of British Insurers. You should always consult your insurance adviser for confirmation.
