

# PLYMOUTH

# *Prowler*

Chrysler Corporation is very proud of its unique history of concept thesis work and innovative concept-to-production skills, from Viper through Minivan. Each has required a risk-embracing culture and has rewarded Chrysler with process and technological improvements for the way we develop, build and sell future products.

Plymouth Prowler is a tribute to the American hot rod culture and a rolling testbed of technology. Due to its limited volume and highly-focused nature, Prowler has undertaken a number of "reach out" experiments in technology, process, marketing and unique supplier relationships, all of which are having tremendous positive applications.

Who else but Chrysler would produce a vehicle that pays homage to the rolling art of hot rods – something so uniquely American that they've become a part of our cultural fabric – yet is instilled with the confidence of '90s technology, reliability and fun-to-drive cool?
