

# Aspen Street Kit Car.

Tuff steering wheel.

Rear deck ducktail spoiler.

Wheel opening flares and 15x8 road wheels.

Engine decals.

Decorative hood pins.

# Big kids like to play in the street.

One of the most popular Dodge cars in history is ready to take on tough customers. Enthusiasts, that is. Because Aspen's new Street Kit Car Package transforms car into pure road machine.

To begin, the exterior is a two-tone Crimson and Tapestry Red Sunfire Metallic with a blacked-out front grille.

But there's a lot more here than special paint. Like wheel opening flares to cover those wide eight-inch wheels and tires. A front air spoiler. A rear deck ducktail spoiler. And quarter windows fitted with deep, horizontally barred louvers.

And underneath all the bold good looks, your customers will find some very practical equipment to make the Street Kit Car a good handling machine. Like fat GR60x15 RWL Aramid fiber-belted radial tires fitted to special 15x8 road wheels. And a rear sway bar added to the suspension setup.

This array of road car endowments is backed up by the power of a husky 360 four-

barrel V8 engine. It's a required option that includes a special hood decal and works in combination with a TorqueFlite automatic transmission. In other words, this Aspen has plenty of guts to pay off all that aggressive-looking sheet metal.

In fact, the package even includes decorative hood pins, windshield retention clips, and back-light retention straps.

Of course, anyone in the market for this much machine really means business. So we've included Richard Petty "No. 43" roof and door decals and Dodge quarter panel decals as part of the deal. These can be easily applied by your customer just in case he wants to show his true colors.

Finally, the interior features a standard Tuff steering wheel to add just the right grip and feel to the boldest breed of Aspen to ever hit pavement.

Aspen Street Kit Car. For tough customers who really like to play in the street.
