# '85 CHEVY PASSENGER CARS AND TRUCKS HAVE A LOT OF PULL.

Over the years, continuing engineering improvements have helped make Chevy cars, trucks and motor home chassis ideal for towing trailers and carrying motor homes in many different weight classes.

This guide has been prepared to help you select the Chevrolet car, truck or motor home chassis that has both the required capacity and the equipment to handle the full loaded weight of your trailer or motor home.

The cautions and considerations included on the opposite page should be observed regardless of the vehicle you choose.

## TRAILER TOWING CAUTIONS

**About Brakes**—To help avoid personal injury due to poor braking action: Trailer brakes of adequate size are required on trailers over 1000 pounds loaded weight.

If trailer brakes are to be used with your 1985 Chevrolet, follow the installation and balance instructions of the trailer brake maker. Do not tap into the car's or truck's brake system if use of the trailer brake system requires more than 0.02 cubic inch of fluid from the car's or truck's master cylinder. The car's or truck's brake fluid capacity will not be enough to operate either the car or truck and trailer brakes under all kinds of use if more than 0.02 cu. in. of fluid is required. All brake fluid parts must be able to stand 3000 psi. The brake fluid tap must be made to the master cylinder port supplying fluid to rear brakes. Copper tubing is subject to fatigue failure and must not be used.

Before going down a steep or long grade, reduce speed and shift the transmission into a lower gear to control your speed. Avoid long or frequent use of the brakes. This could cause the brakes to get hot and not work as well.

**About Hitches**—To help avoid personal injury due to sway caused by such things as crosswinds, big trucks passing, and road roughness, or due to separation of the trailer:

A properly installed and adjusted frame-mounted weight-distributing hitch and sway control with enough capacity are required for trailers over 2000 pounds loaded weight.

The trailer tongue load should be kept at 10% of the loaded trailer weight for deadweight hitches and 12% for weight-distributing hitches. Tongue loads can be adjusted by proper distribution of the load in the trailer. This can be checked by weighing separately the loaded trailer and then the tongue.

Do not use axle-mounted hitches. They can cause damage to the axle housing, wheel bearings, wheels or tires.

Do not allow steel hitch parts to be in direct contact with aluminum bumper

parts if so equipped. When steel and aluminum are in contact, a galvanic reaction (a form of corrosion) can occur which will progressively lessen the strength of the contacting metals to the point of failure. An organic compound or paint should be used as a barrier on the contacting surfaces and on the attaching fasteners.

When a trailer hitch is removed, be sure to have any mounting holes in the body sealed. This will help prevent entry of exhaust fumes, dirt or water.

Caprice Classic with Town and Country Trailer

## TRAILER TOWING CONSIDERATIONS

### About Hitches

Chevrolet offers some deadweight trailer hitches which can be used on Chevrolet cars and trucks towing trailers up to 2000 lbs. loaded weight. Full-size trucks with a step-type bumper can tow trailers up to 4000 lbs. loaded weight.

When these trailer-loaded weights are exceeded, a frame-mounted load-distributing hitch and sway control with enough capacity must be used on the car or truck.

Use only trailer hitches which permit normal operation of the energy-absorbing bumper system, if so equipped. For example, a rigid fore-and-aft connection between the bumper and any other part of the car may increase damage in the event of a crash.

### About Tires

The tires furnished on your car and specified for your truck are qualified for trailer towing. When towing trailers using a weight-distributing hitch on a Chevrolet wagon or any Celebrity or Monte Carlo, increase the front tire pressure 2 psi above the cold tire pressure or "Maximum Load" shown on the tire placard. This increase should never exceed maximum pressure shown on side of tire. NOTE: The allowable passenger and cargo load for cars or GVW for trucks, also shown on the same placard, is reduced by the tongue weight when the trailer is connected.

### About Break-in

See the new car or truck break-in instructions in the Owner's Manual. Also, it is recommended that the new vehicle be operated for 500 miles before trailer towing. At the end of this 500-mile break-in period, speeds over 50 MPH and full throttle starts should be avoided during the first 500 miles of trailer towing.

### About Maintenance

More frequent service is required when using your car or truck to pull a trailer. Change the: (1) Automatic transmission fluid each 5000 miles of heavy continuous trailering for transmission without an external oil cooler—15,000 miles with external oil cooler, or when heavy-duty oil cooler is installed on truck models. Do not overfill when replacing fluid. (2) See the Maintenance Schedule folder in your vehicle for information on axle fluid change interval when towing. (3) Engine oil each 3 months or 3000 miles, whichever occurs first. (4) Positive crankcase ventilation valve each 12 months or 15,000 miles, whichever occurs first. See Owner's Manual for important facts on cooling system care and brake adjustment.

### See your dealer for additional information

For detailed information on standard features, options and powertrains for specific cars or trucks, ask your Chevrolet dealer for the appropriate catalog.

## TRAILERING TIPS

Towing a trailer requires a certain amount of experience before setting out for the open road. Get to know your rig. Learn the "feel" of the added weight of the trailer.

### About Starting a Trip

Check trailer hitch and platform, safety chains, electrical connector, lights, tires and mirror adjustment. Before entering traffic with a trailer that has electric brakes, start the vehicle and trailer moving and apply the trailer brakes by hand to be sure the trailer brakes are working and the trailer electrical system is connected.

### About Engine Cooling When Trailering

Your cooling system may temporarily overheat during severe operating conditions, such as:

- Climbing a long hill on a hot day.
- Stopping after high-speed driving.
- Idling for long periods in traffic, or
- Towing a trailer.

If the hot light comes on (or the coolant temperature gage needle goes into the warning zone) and your air conditioner is on, turn it off. If the hot light comes on while stopped in traffic, shift the transmission to neutral ("N").

If the hot light doesn't go off (or the temperature gage needle doesn't start to drop) within a minute or two,

- Pull over in a safe place and stop the car. Set the parking brake and shift to "Park" (with manual transmission, shift to "Neutral" and set the parking brake).
- Don't turn off the engine. Increase the engine speed until it sounds like it's going about twice as fast as normal idle speed. Bring the idle speed back to normal after two or three minutes.

### Note:

For passenger cars equipped with an electric fan, such as Cavalier, Celebrity and Citation II, don't turn off the engine and don't increase engine speed. **Caution:** Keep hands, tools, and clothing away from the engine cooling fan to help prevent personal injury. This fan is electric and can come on whether or not the engine is running.

If the hot light still doesn't go off (or the temperature needle doesn't start to drop), turn off the engine and proceed as follows:

- Lift the engine hood. Look at the coolant level in the "see-through" coolant recovery tank. The coolant level should be between the "Full" and "Add" ("Hot" and "Cold") marks on the tank. If the coolant appears to be "boiling," wait until it stops before proceeding further. (It should not be necessary to remove the radiator cap to check the coolant level, and it can be dangerous to do so if the engine is still hot. See Caution below.)

### Caution:

To help avoid the danger of being burned:

- Do not remove the coolant recovery cap while the coolant is "boiling."
- Do not remove the radiator cap while the engine and radiator are still hot.

Scalding fluid and steam can be blown out under pressure if either cap is taken off too soon.

If the coolant level is low:

- Look for leaks at the radiator hoses and connections, heater hoses and connections, radiator, and water pump. See that the fan belts are not broken or off the pulleys and that the fan turns when the engine is started.

- Add coolant to the coolant recovery tank.

If the coolant level in the coolant recovery tank is at the correct level and the hot light still comes on, air may be trapped in the cooling system. This may prevent coolant from returning to the radiator. If this is the case, it may be necessary to add coolant directly to the radiator. See "Coolant Replacement" in the "Service and Maintenance" section of the Owner's Manual.

Follow steps for the correct way to remove the radiator cap and add coolant to the radiator.

After the hot light is out (or the temperature gage is out of the warning zone), resume driving at a reduced speed. Return to normal driving after about 10 minutes if the light does not come back on (or the temperature gage needle doesn't go back in the warning zone).

## TRAILERING TIPS

### About Downgrades and Long Uphill Grades

Reduce speed and use lower transmission gear to assist braking on long or steep downgrades (see cautions on page 3). In rear-drive cars and all trucks, downshift transmission to a lower gear and reduce speed to 45 MPH or below on long uphill grades to reduce possibility of engine overheating.

### About Turning and Passing

Trailer wheels are closer than car wheels to the inside on curves. Avoid soft shoulders and curbs by driving slightly beyond normal turning point. Avoid sudden maneuvers. Allow extra distance for passing and returning to driving lanes. Signal well in advance.

### About Following and Stopping

For each 10 MPH on speedometer, allow one car and trailer length between you and the car ahead.

### About High-Altitude Performance

An engine loses 4% of its sea level performance for every 1000 feet of altitude. An engine operating at 10,000 feet above sea level will lose about 40% of its performance. For pulling trailers at high altitudes, engines with higher horsepower are recommended, as are higher numerical axle ratios.

### About Parking

Cars or trucks with trailers should not be parked on a grade; however, if you must, this is the way to do it:

- (1) Apply regular brakes;
- (2) have passenger place wheel chocks under trailer's wheels;
- (3) when wheel chocks are in place, release regular brakes until chocks absorb load;
- (4) apply regular brakes and then parking brakes; release regular brakes;
- (5) shift any automatic transmission to "Park."

When starting, after being parked on a grade:

- (1) Apply regular brakes and hold until steps 2 and 3 below are completed;
- (2) start engine in "Park";
- (3) shift into gear and release parking brakes;
- (4) release regular brakes and drive until the chocks are free;
- (5) apply regular brakes and have helper remove chocks.

Suburban with Airstream Trailer

Caprice Classic Wagon with Yellowstone Trailer

# PASSENGER CAR TRAILERING GUIDELINES

Passenger cars are designed and intended to be used mainly to carry people. And although they can tow trailers, towing will affect handling, durability and economy. Your safety and satisfaction when towing depend upon proper use of correct equipment.

Therefore, Chevrolet is supplying the following information to help provide comfortable towing under normal vacation-type trailering in North America as well as for some infrequent, short, low-speed trips.

The factors to consider when choosing a vehicle for towing a trailer are the adequacy of the engine, transmission and axle for power;

cooling equipment; suspension, springs and shocks; brakes; and steering. The conditions under which you intend to tow the trailer will determine the size of trailer that can be towed, the speed at which it can be towed and the equipment needed on the tow vehicle.

Rather than Chevrolet demanding what is adequate performance, we ask that you determine what is acceptable to you (see "Engine and Axle Combination"). The trailer weight, shown in the chart below, if exceeded, may result in unacceptable towing performance, as well as reduced tow vehicle durability, acceleration and handling.

**TOW-VEHICLE MAXIMUM TRAILER SPEED/WEIGHT CHART**

Tow Vehicle		Maximum Trailer Weight in Pounds			
Name	Approximate License Wt. (Lbs.)	Speeds Over		Speeds Below	
		(1) 45 MPH w/Long, Steep Grades	(2) 45 MPH	(3) 35 MPH	(4) 25 MPH
Chevette	2200	2400	3300	3800	4400
Cavalier	2400	2900	3600	4200	4800
Citation II	2500	2900	3700	4400	5000
Celebrity	2700	3200	4000	4700	5400
Corvette	3000	3600	4500	5200	6000
Camaro	3200	3800	4800	5600	6400
Monte Carlo	3400	4100	5100	6000	6800
Chevrolet	3800	4600	5700	6600	7600

(1) Typical vacation trips anywhere in the country:

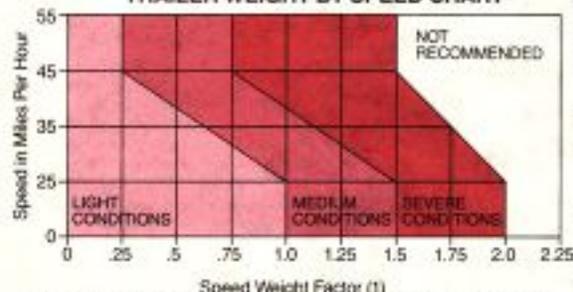

- A. Long grades over 2 miles.
- B. Steep grades steeper than those on interstate highways and over 1/4-mile long.

(2) Typical vacation trips with no long or steep grades.

- (3) Infrequent trips less than 100 miles
- (4) Infrequent trips less than 20 miles.

The following speed/weight chart will help you select the proper equipment by providing an indication of the towing conditions determined by the speed and weight of the trailer.

**TRAILER WEIGHT BY SPEED CHART**

(1) The factor is determined by dividing the weight of the tow vehicle into the weight of the trailer.

$$\text{Speed Weight Factor} = \frac{\text{Weight of Trailer}}{\text{Weight of Tow Vehicle}}$$

If the intended use is entirely in the light category, little or no towing equipment is required. As use increases to medium or severe, more equipment needs to be selected to provide safe and satisfactory operation. It is much easier and far less expensive to have trailering equipment such as correct axle ratio, heavier duty cooling and suspension, etc., installed when the vehicle is being built at the factory than to have the original equipment replaced after the vehicle is built.

In addition to speed and weight limitations, towing equipment must be selected on the following basis:

- Vehicle operation with trailer under 2000 feet above sea level, at temperatures less than 65° F (18.3° C) and on slight or no grades. **(Light)**
- Vehicle operation with trailer between 2000 and 5000 feet above sea level, or at temperatures between 65° F and 85° F (29.4° C) or no more than medium grades. **(Medium)**
- Vehicle operation with trailer over 5000 feet above sea level or at temperatures over 85° F (29.4° C) or on long, steep grades. **(Severe)**

**CHEVETTE CS**

**CAVALIER**

**CAVALIER WAGON**

**CELEBRITY**

**CELEBRITY WAGON**

**CITATION II**

**CAMARO**

**MONTE CARLO**

**CORVETTE**

**CHEVROLET**

**CHEVROLET WAGON**

In equipping a vehicle for trailering, we recommend the following:

#### **Engine and Axle Combination**

The more powerful the engine and the higher numerically the axle ratio, the more towing acceleration will be available when starting, merging into traffic, passing and climbing a grade. Use the performance of your present vehicle as a guide. If more performance is desired, select an engine with more power or a higher axle ratio. A lower powered engine or lower axle ratio will result in less towing performance.

#### **Automatic Transmission**

Generally, if a manual transmission is used for towing, clutch

wear will be accelerated. An automatic transmission is recommended because of its increased starting torque, durability and ease of operation.

#### **Cooling**

More cooling is required with heavier trailers, higher outside temperature and longer or steeper grades. If the outside temperature is cool and your trailer is light, the standard cooling system of the tow vehicle will probably be adequate.

An available heavy-duty cooling system, RPO V08, is required for severe- and medium-condition towing and recommended for light-condition towing of trailer weights over 0.5 times the tow vehicle license weight.

#### **Suspension**

Heavy-duty suspension, RPO F40, provides heavy-duty front and rear springs and shock absorbers. The springs help to carry the tongue load of the trailer and the shock absorbers minimize the uncomfortable bounce of towing a trailer.

#### **Power Brakes**

Power brakes, RPO J50, are required for all vehicles when trailering. Power brakes make it easier for the driver to control braking of the vehicle-trailer combination. When manual brakes are used, the addition of a trailer to the tow vehicle increases the effort required by the driver to brake the vehicle.

#### **Power Steering**

When a weight-distributing (equalizing) hitch is used, the driver's steering effort is increased, making power steering, RPO N41, advisable.

#### **Summary**

If the usage category is medium or severe due to only one condition such as temperature, that condition can be taken care of by ordering heavy-duty cooling, RPO V08. If the medium or severe usage category is due to altitude, grade, speed and weight, a higher power engine and a numerically higher axle ratio will be necessary, as well as heavy-duty cooling.

# 1985 TRUCK TRAILERING CHARTS

This page describes how to use the charts on pages 11 through 22, as well as providing additional information about trailer hitches, trailer wiring harnesses and available coolers and cooling. All standard Chevrolet vehicles can tow up to 1000 lbs. without additional equipment. All trailer weights shown include the driver and one passenger. Additional passengers will reduce the trailer weight shown.

The charts on the following pages specify required trailering equipment (shown in red) and recommended available options; standard and not-required equipment are shown in black.

To determine the required and recommended equipment, figure your trailer's maximum loaded weight. Then, using the chart for your Chevy model, look down the column that either matches or exceeds this weight. The components indicated in red satisfy the minimum vehicle requirements. Larger components may be ordered for special needs or applications. A larger engine with a lower axle ratio may be used if the GCWR matches or exceeds the specified engine and axle ratio.

To help in ordering, each column lists the Regular Production Option (RPO) number, except the rear axle ratio where the actual ratio is shown.

## Deadweight-Type Trailer Hitches

### For S-10 Pickups, El Camino, S-10 & K Blazers and Suburban

There are two types of hitches available for use on these models for trailers up to 2000 lbs. They are the step bumper on S-10 Pickups and the deadweight hitch on the El Camino, S-10 & K Blazers and Suburban. The step bumper requires the installation of a 1½" diameter hitch ball. The deadweight hitch is bolted to both the frame and the rear bumper and includes a 1½" diameter hitch ball.

Availability is as follows:

#### Step Bumper:

S-10 Pickups—Painted, RPO VB2 or V43, or Chrome, RPO VB3.

#### Hitch Ball:

1½" for trailers up to 2000 lbs. with maximum tongue load of 200 lbs.—accessory only.

#### Deadweight Hitch:

El Camino—Accessory only. S-10 & K Blazers and Suburban—RPO VR2 and accessory.

#### For Full-Size Pickups

The step bumper is the only factory-installed type of deadweight hitch available for these models. It can be used with light and medium trailers up to 4000 lbs. with a maximum tongue load of 400 lbs. A 1½" diameter hitch ball must be installed for light

trailers up to 2000 lbs. and a 2" diameter hitch ball for medium-duty trailers up to 4000 lbs.

Availability is as follows:

#### Step Bumper:

All Full-Size Pickups—Painted, RPO V43 and accessory or Chrome, RPO V42 and accessory.

#### Hitch Ball:

1½" or 2" diameter—accessory only.

#### For Vans

Two (2) types are available. A deadweight hitch with a 1½" diameter hitch ball for trailers up to 2000 lbs. This hitch is bolted to both the frame and the rear bumper. The other type is a step bumper with a 1½" or 2" hitch ball for trailers up to 4000 lbs. with a maximum tongue weight of 400 lbs.

#### Deadweight Hitch:

Chevy Van and Sportvan—RPO VR2 or accessory.

#### Step Bumper:

Chevy Van and Sportvan—accessory only.

#### Hitch Ball:

1½" or 2" diameter—accessory only.

## Weight Distribution Hitch Platform

This type of hitch is required when the trailer weight exceeds 4000 lbs. (over 2000 lbs. on S-10 Pickups, S-10 & K Blazers, Suburban and El Camino), or the tongue weight exceeds 400 lbs. The platform is bolted to the frame through prepunched holes. Hitch ball, mounting head, equalizing and antisway assemblies are also required and are available from outside sources. The maximum trailer weight, maximum tongue load and availability of the hitch platform are:

#### S-10 Pickups & Blazers:

5000-600 lbs. Included with Trailering Special, RPO ZB2 and accessory.

#### El Camino:

5000-600 lbs.—accessory only.

#### K Blazer:

6000-750 lbs. RPO VR4 and accessory.

#### Suburban:

9500-1000 lbs. RPO VR4 and accessory.

#### Full-Size Pickups:

7000-800 lbs.—accessory only.

#### Vans:

7000-800 lbs., RPO VR4 and accessory.

#### Note: For accessory part numbers, see page 23.

## Fifth-Wheel-Type Trailer Hitch For Full-Size Pickups and Chassis-Cab

There are two (2) types of pickup 5th-wheel hitch installations. The first has the 5th wheel mounted on a bar which is supported by brackets mounted over or on the fender housings. The kingpin is mounted on the trailer. With the other type, the kingpin is mounted in the bed of the pickup box and the 5th wheel is mounted on the trailer. The type of hitch is supplied and installed by the trailer manufacturer.

Fifth-wheel trailers have a greater percentage of their weight on the kingpin (tongue load) than a conventional trailer. Because of this fact, greater attention must be given to the maximum available payload and GVWR. The charts on pages 18, 19, 20, 21 and 22 show the maximum allowable payload and GVWR for each application which should not be exceeded. The weight of any additional equipment and all passengers must be subtracted from the payload weight shown to determine the available kingpin load.

## Trailer Wiring Harness For All Models

Chevrolet makes available two (2) types of wiring harnesses—a 5-wire and a heavy-duty 7-wire. The 5-wire harness includes a male-female connector with pigtail that must be applied into the trailer wiring harness. The heavy-duty 7-wire harness is recommended for all trailers with brakes. It does not include a connector. A heavy-duty turn signal flasher must be installed when a wiring harness is used. Harness and flasher availability is as follows:

#### S-10 Pickups & Blazers:

5-wire and flasher—RPO U89 and accessory. 7-wire and flasher—Included with Trailering Special, RPO ZB2 and accessory.

#### El Camino:

5-wire and flasher—accessory only.

#### K Blazer & Suburban:

5-wire and flasher—accessory only. 7-wire and flasher—Included with Trailering Special, RPO ZB2.

#### RPO UY7 and accessory.

#### All Full-Size Pickups:

5-wire and flasher—accessory only. 7-wire and flasher—accessory only.

## Coolers and Cooling For All Models

Trailering creates higher than normal temperatures in coolant, engine and transmission oil. To help control these temperatures, Chevrolet offers the following options:

**RPO V01 (V05 on Vans)** This option provides increased radiator cooling either through the use of a larger radiator, a larger fan or increased fan pitch to pull more air through the radiator. On many truck models this type of cooling is included with the automatic transmission or factory-installed air conditioning option.

**RPO V02** This is a heavy-duty automatic transmission oil cooler option. Transmission oil is circulated through a high-capacity cooler located in the right-hand-side tank of the radiator.

**RPO KC4** This engine oil cooler option circulates oil through a separate cooler mounted ahead of the radiator. On Van models it is located in the left-hand-side tank of the radiator. Diesel models include an engine cooler located in the radiator tank.

## Mirrors

Most tow vehicles will require outside mirrors with a longer extension than is provided as standard equipment. Optional mirrors are available for all models. Check to verify that the maximum mirror width exceeds the width of the trailer.

### Note:

Four-speed manual transmission may be specified in lieu of an automatic in all models with a GVWR over 6000 lbs.

Maximum trailer weight and GCWR will be the same. Other manual transmission applications are limited to 1000-lb. maximum trailer weight. Use of H.D. Trailering Special, RPO ZB2, requires an automatic transmission.

**1985 TRUCK TRAILERING REQUIREMENTS AND RECOMMENDATIONS.** Chevy trucks, with their overall versatility, make great towing vehicles. Properly equipped, they can tow trailers up to 12,500 lb. gross trailer weight.

**1985 Chevy Truck Models**  
Mini- and full-size motor homes do not have specific charts covering their trailering requirements. However, the maximum GCWRs for these units are

covered in the GCWR chart shown below.

**Trailer Weights**  
The Trailer Manufacturing Rating stamped on the identification tag

attached to the left front of the trailer frame will indicate your trailer weight. To determine your hitch weight, figure 10% of loaded trailers equipped with a

deadweight hitch and 12% with weight-distributing platform. Good trailer hitch weight can be achieved by selective and careful loading.

GROSS COMBINATION WEIGHT RATING (GCWR) Includes Weight of Both Truck and Trailer By Engine & Axle Ratio For Recreational Applications																					
GCWR (lb.)	5000	6000	6500	7000	7500	8000	8500	9000	9500	10,000	10,500	11,000	11,500	12,000	12,500	13,000	14,000	15,000	11,500	18,500	
<b>ENGINES</b>	<b>REAR AXLE RATIOS</b>																				
2.5L (151) 4 GAS		3.73	4.11																		
2.8L (173) V6 GAS			3.08	3.42	3.73		3.73														
4.3L (262) V6 GAS	2.41		3.73		3.98		3.42	3.73/4.10													
4.8L (292) V6 GAS							4.10		4.56												
5.0L (300) V8 GAS					2.41	2.96		3.73	3.08	3.23	3.42		3.73								
5.7L (350) V8 GAS						2.96		2.96	3.73	3.08	3.23	3.42		3.73	4.10		4.56				
6.2L V8 DIESEL						2.73		3.08	3.23	3.42		3.73		4.10		4.56		5.80*			
7.4L (450) V8 GAS														3.21			3.73	4.10	4.56	4.86*	

\*Motor Home Classes only. \*Available only when RPO K24 Engine Oil Cooler is specified.

THIS CHART SHOWS THE MAXIMUM ALLOWABLE GROSS COMBINATION WEIGHT RATING (GCWR) BASED ON ALL OF THE AVAILABLE TRUCK ENGINES AND REAR AXLE RATIOS. THE GCWR INCLUDES THE TOTAL LOADED WEIGHT OF BOTH THE TRUCK AND TRAILER. ANY AVAILABLE ENGINE MAY BE USED FOR TRAILERING IF THE GCWR SHOWN IS NOT EXCEEDED.

NOTE: THE TRAILER WEIGHT CAN BE INCREASED BY 25% IF THE VEHICLE SPEED WILL NOT EXCEED 25 MPH.

NR—NOT REQUIRED. (1) FOR FURTHER INFORMATION, SEE COPY ON PAGE 10. (2) M03 4-SPEED WITH OVERDRIVE.	(2) INCLUDED IN TRAILERING SPECIAL PACKAGE RPO-Z70. (1) INCLUDED IN TRAILERING PACKAGE RPO-Z72.		REQUIRED TRAILERING EQUIPMENT SHOWN IN RED

NOTE 1: ON ALL ASTROS THE GROSS TRAILER WEIGHT MUST BE REDUCED BY ANY CARGO CARRIED.

NOTE 2: TRAILER WEIGHT AND WIND DRAG AFFECT HIGHWAY ACCELERATION, TOP SPEED AND FUEL ECONOMY. TRAVEL TRAILERS WITH ROUNDED CORNERS TOW EASIER THAN BLUNT, SQUARE CORNERED TRAILERS. FOR ACCEPTABLE PERFORMANCE WITH SQUARE CORNERED TRAILERS, SELECT AN ENGINE WITH MORE POWER AND/OR HIGHER AXLE RATIO THAN THE MINIMUM ENGINE AND AXLE SHOWN.

NOTE 3: IF YOUR VEHICLE IS EQUIPPED WITH AN OVERDRIVE AUTOMATIC TRANSMISSION, WHEN YOU ARE TOWING A TRAILER MORE THAN 1200 KILOGRAMS (2600 POUNDS), WE RECOMMEND YOU SHIFT TO THIRD GEAR RANGE (OR INSTAD OF OVERDRIVE (O)) FOR NORMAL TOWING. THIS IS NOT INTENDED TO INTERFERE WITH THE PRACTICE OF MANUALLY DOWNSHIFTING ON UPHILL AND DOWNHILL GRADES.

NOTE 4: MODEL AND DRIVELINE COMBINATIONS MUST BE VERIFIED BY YOUR LOCAL DEALER FOR CORRECT EMISSIONS EQUIPMENT.

NOTE 1: MAXIMUM GROSS COMBINATION WEIGHT RATING (GCWR) FOR 5TH WHEEL COMMERCIAL TRAILERING IS 18,000 LBS. WITH GASOLINE ENGINES AND 15,000 WITH DIESEL ENGINES.  
 NOTE 2: MODEL AND DRIVELINE COMBINATIONS MUST BE VERIFIED BY YOUR LOCAL DEALER FOR CORRECT EMISSIONS EQUIPMENT.

## '85 AVAILABLE TRAILERING EQUIPMENT

Trailering usually means long hours behind the wheel, and Chevrolet offers a wide selection of available options to help make this time convenient and comfortable. Illustrated and described here are only a few of the trailering items available. Check your Chevrolet dealer for complete information on these as well as many other items for your car or truck.

**Transmission Oil Cooler.** Ideal for trailering. Helps control transmission of temperature for heavy trailers during heavy use and long hauls. Important for highway grade traveling. (Dealer-installed accessory.)

### Wiring Harnesses.

5-wire used with trailers up to 2000 lbs. gross weight and 7-wire for larger trailers. Harnesses tie into vehicle's electrical system to give your trailer lights, plus electric brakes or battery charging. (See diagram for wiring color code.)

The following color code for Chevy cars and trucks should be used when installing trailer wiring harness.

- WHITE  
Ground.
- LIGHT GREEN  
Right stop  
and  
turn signal.
- YELLOW  
Left stop  
and  
turn signal.
- BROWN  
Tailight  
and  
running lights.
- LIGHT GREEN  
Braking lights  
(7 wire  
harness only).
- RED  
Use for battery  
charging. Connect  
to starter solenoid  
(7 wire  
harness only).
- BLUE  
Use for electric  
brake or  
battery wiring.

### A Word About Engines

Chevrolts are equipped with engines produced at facilities operated by GM car and truck groups, subsidiaries or affiliated companies worldwide.

## CHEVY RV CUTAWAY VAN.

Chevy chassis for mini-motor homes. Chevy RV Cutaway Vans provide a good base for small motor homes. They are available in three wheelbases: 110-in. with single rear wheels (Special Equipment Order only), 125-in. with single or available dual rear wheels and 146-in. with dual rear wheels. GVWRs range up to 10,500 lbs. Chevy Vans and Sportvans are also available for conversions.

Chassis floor and cab with doors attached are submerged in primer and electrically charged to draw paint into seams and hidden crevices.

Other options available: ComfortFit steering wheel. Speed and cruise control. Factory air conditioning. Special exterior trim.

Automatic transmission standard.

Front and rear floor panels are welded to cross sills, side rails and out-riggers. Cross sills and out-riggers are made of heavy-gauge steel.

Computer-matched, power-assisted brake systems. Front disc brakes and finned drum rear brakes are incorporated into complete braking systems which are computer-matched to GVWR.

Special interior trim available. Includes driver and passenger high-back bucket seats plus other interior appointments.

Standard power steering provides an easy steering effort on or off road.

Cockpit-type instrument cluster with gage-type instrumentation on 146-in.-wheelbase models.

High Energy Ignition system. Helps provide quick starts and protection from moisture, dirt and road splash. (Gas engines only.)

5.7 Liter (350 Cu. In.) 4-barrel V8 engine standard.

6.2 Liter V8 Diesel engine is standard on diesel engine models.

Heavy-duty Delco Freedom battery and 66-amp generator standard. (Dual batteries with diesel engine.)

Heavy-duty two-stage rear leaf springs automatically adjust to change in load.

Extended hood makes possible 27 easy service checks.

Rugged girder beam independent front suspension with coil springs. Wheels step over rough spots individually to help smooth the ride.

Front stabilizer bar.

Heavy-gauge cab components. All-welded construction.

Many cab parts are of zinc-rich precast metal to help resist corrosion.

Interchangeable front and rear wheels.

33-gal. fuel tank (125" & 146" WB); 22-gal. fuel tank (110" WB).
