

LADA

NEW HORIZONS

LADA Vesta

Superiority on our territory

LADA Vesta means a high level of comfort and bright style. Each line of the body and each facet of the lighting equipment emphasize the personality of the vehicle: dynamics and sports car steerability, comfort of the roomy cabin, and excellent ride quality. Reliable, durable, and modern LADA Vesta combines the best and the most essential – to ensure confidence under any circumstances.

**Convenient tool.
Ideal gadget**

The top-class equipment means my best results in sports.
A convenient tool means quality and pleasure of creation.
A comfortable vehicle means a dreamy expectation of every trip.
The full-scale life means correct choice of things, emotions, feelings.

- Climatic system able to maintain the preset temperature.
- Windscreen heating: a perfect system for latitudes with half-year winter.
- Electric adjustment and heating of outer mirrors: an essential function for better visibility.
- Rain and light sensors: vehicle's fast reaction to a changing environment.
- Steering wheel is adjustable by height and reach: comfort for drivers of any height and proportions.
- Height-adjustable driver's seat with lumbar support: capability to adjust the vehicle as you see fit.
- Rear armrest with glass holders.
- Seat heating: three heating levels to ensure maximum comfort.
- Controls indicators and symbols have white backlight optimal for perception.
- 14 l cooled glove box.
- On-board computer to track fuel consumption, determine the travel time and average speed, and other parameters.
- Steering wheel with multimedia and cruise control buttons.
- USB and AUX connectors in the front part of floor tunnel, in the mobile phone niche.
- Parking brake buzzer goes on when you start driving.
- Cruise control system with speed limiter function: necessary both on the city and country roads.
- Rear-seat cushion heating. Care for a passenger is a matter of courtesy.
- Central armrest with the box and USB connector to charge gadgets.

Protection mode: permanent

Lacquered surfaces cover the body frame of high-strength steel. Smart safety package is switched on constantly but does not show itself. The feeling of being protected my car gives me... It cannot be expressed with words, but I can feel it filling my life.

1

Electronic stability control (ESC). System with anti-slip function. With drifting of the front axle or skidding of the rear axle, the system individually controls each wheel rotation speed to adjust the car orientation.

3

Electronic brakeforce distribution (EBD) system. Optimum distribution of the brake force between the axles to prevent the car from drifting when the brake pedal is depressed.

5

Traction control system (TCS). For dynamic start on a slippery or uneven surface. In case of the wheels skidding, TCS briefly performs function differential lock.

2

Driver's and passenger's airbag. Basic and essential system of driver protection (may be disabled).

4

Hill-start assist (HSA). Assistance while starting on a hill: after the brake pedal is released, the pressure in the brake line is maintained for a few seconds – enough for a confident start without a risk of rolling back.

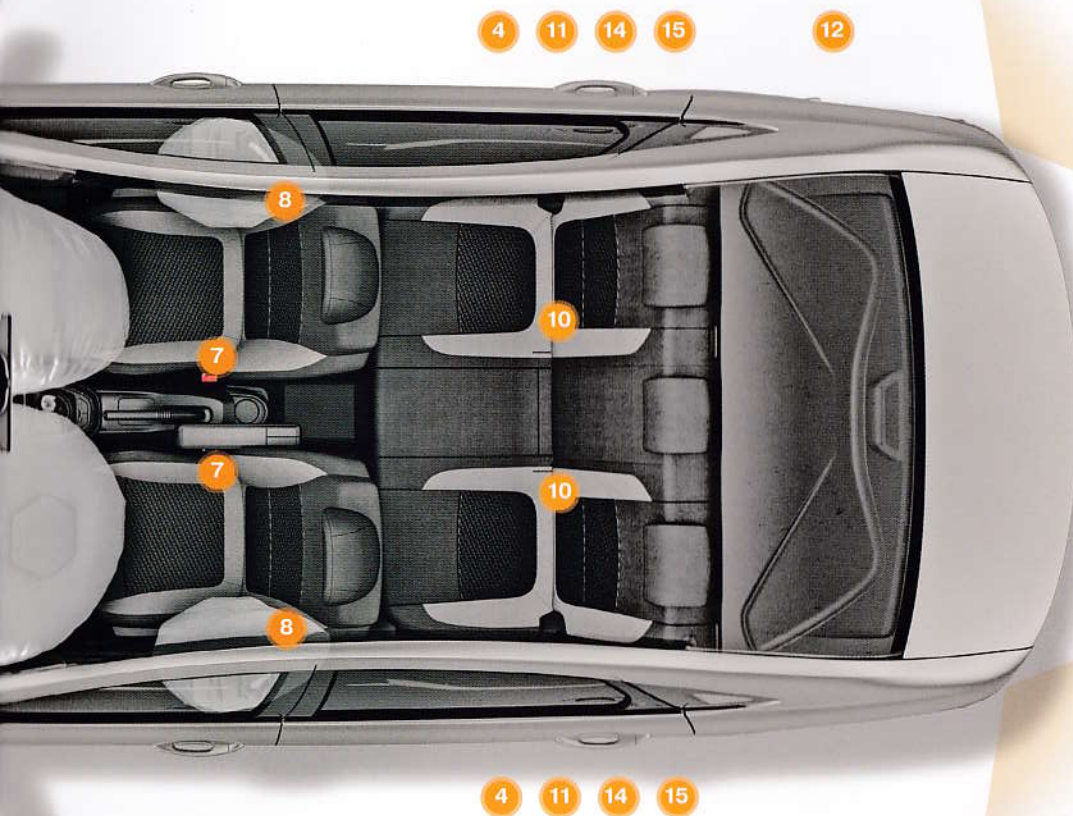

6

Daytime running lights. A safe vehicle is the one noticeable on the road. LADA Vesta will never be lost in traffic due to its bright daytime running lights.

7

Safety belts of the driver and front passenger with pretensioners and force limiters.

8

Side airbags:

are in the front seats backrests for head and body protection in case of lateral impact.

9

ERA-GLONASS emergency

call system: when a car gets into an accident, the system automatically makes an emergency call, transmitting parameters of the car.

10

ISOFIX fastening system for child safety seats and rear doors locking: for comfortable and safe transportation of young passengers.

11

Rear disk brakes:

reliable deceleration from high speeds.

12

Lockable fuel tank flap:

confident safe-keeping of fuel and fuel system.

13

Rear parking sensors:

when reversing, you can estimate the distance to extraneous objects.

Rear-view camera:

when moving backwards you can see what is directly behind you, including objects that are not visible in the sideview mirror.

14

Anti-lock braking system (ABS)

for better steerability of the car in case of emergency braking.

15

Brake assist system (BAS).

In case of abrupt braking, the system automatically increases the pressure in the brake line to slow down the car as effectively as possible.

Every-day
dynamics

To stride up the steps, feeling how the legs muscles spring. To put the hand into the glove feeling how suede surrounds the fingers softly and snugly. Having become one with the vehicle, to maneuver easily among mobile and fixed obstacles... Sometimes I think I live in the future where the vehicle "brains" and the human neurons will connect at the instant of turning the ignition key.

LADA Vesta is able to navigate narrow streets with surgical precision, dynamically and comfortably pass along roads of different quality. The solid subframe and shortened steering rack (2.8 revolutions of the steering wheel from stop to stop) give LADA Vesta the traits of a sports coupe. And thanks to the durable suspension with large wheel travel, LADA Vesta features off-road performance inherent to crossovers. LADA Vesta is always ready for high-speed travel, and even as if asking the driver to rev it up. Two engine models and two transmission options allow choosing LADA Vesta that is in line with one's own driving style.

- 106 hp engine. Classic choice. Optimum. Comes with manual transmission or AMT.
- The most powerful 122 hp 1.8 l engine is a new way of revealing the personality of LADA Vesta. For this engine, both mechanical and automated manual transmission (AMT) are available. Just listen to yourself and answer: what is my driving style? Sporty? Or comfortable?

AMT is a result of collaboration between the Russian and German engineers.

This GB combines the "mechanical" and "automatic" functionalities. In manual mode, the driver can switch gears with the joystick, and in automatic mode the switching process is controlled by the electronic logics. The transmission settings ensure the most comfortable and economical gear shifting, simulating the actions of a highly careful and skilled driver. AMT was engineered for Russian market, so its serviceability does not depend on the outdoor temperature. AMT has the full functionality of the mechanical transmission, including engine braking. Unlike other transmission options, AMT saves fuel, extends service life. Moreover, it is much more affordable than other automatic transmissions.

LADA Vesta: a car for severe climatic and road conditions:

- Galvanized outside body panels.
- Metal engine protection shield.
- Antigravel floor sill and bottom protection.
- High level of quality: the production technology and components delivery system are based on the Renault-Nissan Alliance standards.

**Friend.
Assistant. Companion**

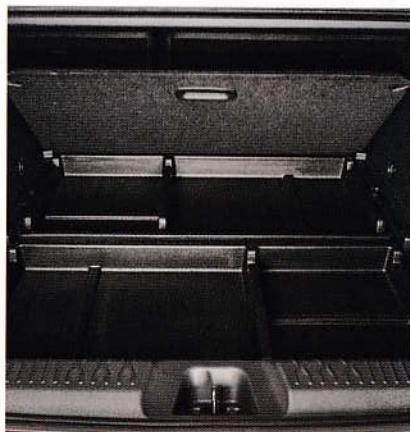

Horizon. The misty shore of a big lake. Waves on a wheat field and serrated line – the border between the forest and the sky. Space, vastness, and freedom – I love them, I need them like air. So my personal piece of the big world is always with me. And there is enough room for all my loved ones. Because my car has a lot of space to live in.

The trunk in the car of such body type requires special attention.

- Double floor with organizer: allows you to make a level platform when folding rear seats backrests.
- The double floor helps organize storage of driver's accessories while keeping the trunk neat.
- Two interchangeable halves of the false floor are trimmed with piled material to improve the trunk design and prevent squeaks and noises.
- Rear seat heating.
- Rear disk brakes.

- Transformable trunk.
- Organizer in the spare wheel niche.
- Vessels storing place with a fixing strap.
- Small, but functional niche in the left part of the trunk.
- The covered niche near the right-side wheel arch.
- Handy hooks for shopping bags.
- Special hooks to fasten the luggage net.
- Exterior trunk opening button.
- Two handles to conveniently close the trunk door.

- Stylish and streamlined fin antenna.
- Central armrest with USB charger for rear seat passengers.
- The trunk capacity is 480 l (up to the shelf screens); with folded second row seats – 825 l (up to the bottom lines of the side windows).

Eye-catching colors

Glacial 221*

White non metallic, famously combined with black body elements and the bright "drops" of the tail lights.

Platinum 691

Classic silver color, which expressively develops the contoured body surface.

Carthage 247

Light and practical. The sparkling and at the same time impressive hue evokes a whole range of positive emotions: from a confident calmness to admiration.

Pluto 608

Dark gray paint, giving a kind of austerity, while emphasizing the play of X-shaped graphics of LADA Vesta.

Phantom 496

A real-time chameleon color, fluctuating from a golden brown to a bluish one. Like a semi-precious stone, arousing inside you a desire to admire and view the car from different angles.

Carnelian 196

Bright metallic-red, the symbol of LADA Vesta's energy. A great addition to the bright design of the car.

Angkor 246

Chocolate "metallic", an attractive balance between bright colors and the austerity of the black and gray.

Blues 492

The color of the sky before a storm, with its complexity and special energy, as well as the musical style, giving the name to this shade.

Black Pearl 676

A strong color, coming out from the harmony with the X-shaped chrome moldings and silvery alloy wheels.

* Non-metallic paint.
