# To us, environmental care comes naturally

Care for the environment is one of Ford's oldest concerns. Long before it became fashionable or required by law, we were questioning established practices and searching for better, more efficient alternatives.

Like so much of our philosophy, the concept of sustainability dates right back to our founder,

Henry Ford, a man who could not abide unnecessary waste.

# Driving into the future

Lighter, quieter, and using less fuel with lower emissions, today's Ford engines create less impact on the environment than ever before. Our smooth, quiet and economical passenger car diesel engines comply with the strict Euro IV-emissions regulations while, at the same time, improve the overall performance. Indeed, our new Galaxy 2.0 Duratorq TDCi 140 PS diesel engine develops higher torque than its predecessor, while producing even less carbon dioxide (CO2) emissions.

# A natural approach to alternative fuel

Imagine a car that runs on renewable fuel derived from sugar beet, cereal or wood shavings. Impossible? Then think again. Ford has been successfully selling the Focus Flexi-Fuel in Sweden since 2001, where sales now account for 80% of all Focus models sold. The 1.8-litre car, which can run on petrol, bioethanol, or a mixture of the two, offers a 70% reduction in carbon dioxide emissions compared to a petrol model, without any loss in performance. Because bioethanol fuel is plant-based, the CO2 emitted at the tailpipe is broadly equal to the CO2 absorbed while the plants were growing.

# Recycling for good

Legend has it that Henry Ford used timber from old packing cases to build floors for the Model T. Today, the average Ford vehicle includes more recycled material than ever. Across our European vehicle range, more than 300 parts are made from recycled non-metallic materials. This helps to safeguard raw materials and diverts unwanted waste from landfill sites. Combined, our use of parts manufactured from recycled and renewable materials kept almost 35,000 tonnes\* of waste out of landfills.

\*2004 figures.

# A breath of fresh air

In our bid to provide the healthiest car interiors possible, the Ford Focus and Focus C-MAX, along with the new Ford S-MAX and Galaxy, were the first cars worldwide to receive the 'Allergy-Tested Interior' seal of approval from the TÜV; the German independent testing and assessment organisation. Not only that, but the certification has also been confirmed by the British Allergy Foundation. By combining materials that are free from harmful emissions, together with pollen and dust filters, the interiors provide the perfect allergy-friendly environment for sufferers of asthma, hay fever or contact allergies, such as eczema.

# When less means more

What impact does a new vehicle have on air quality over its lifetime? How much noise will it produce when it drives down the street? Using a new tool called the Product Sustainability Index, Ford is taking a leading role by addressing the environmental, social and economic impact of its vehicles from the early stages of their development. As one of the key issues facing society in the 21st century, sustainable development presents an enormous global challenge and reinforces our message that 'business as usual' is not an option.

<sup>=</sup> Optional, at extra cost. \*Note: A child seat should never be placed on the front passenger seat when the Ford vehicle is equipped with an operational front passenger's airbag. The safest place for children is properly restrained on the rear seat.

# Larger glovebox

Ford Ka's glovebox has been redesigned to give you more space for all those little things you need to keep handy.

# Aluminium gear knob

The smooth, sports-style gear knob adds a touch of chic (standard on Sportka SE).
