162TSI Highline model shown with optional R-Line package.

The Tiguan

It changes everything

It's not often that an SUV comes along that changes the way people think about driving. The latest Tiguan is that vehicle, a stunning addition to Volkswagen's fleet that sets new benchmarks in terms of style, refinement and pure driver appeal.

With a sleek design that conveys its sporty intent and proportions that allow generous levels of space and comfort inside the cabin, the Tiguan could just be the best-looking SUV on the road.

The Tiguan's performance is every match for its visual appeal. Powered by TSI petrol engine technology, and with 4MOTION all-wheel drive available in the Comfortline and Highline variants, the Tiguan is as capable off-road as it is around town and on the highway. And together with BlueMotion Technology as standard, you can count on the Tiguan for excellent fuel efficiency.

Outstanding levels of safety, technology and connectivity are a Tiguan hallmark and help set it apart from other vehicles in its class. Not only has the Tiguan received an array of technological innovation to improve driving dynamics, the addition of active safety features as standard makes the Tiguan one of the most confidence-inspiring SUVs ever to be released.

Inside, the Tiguan combines stylish sophistication and space with driver aids designed to make driving as pleasurable as possible. Premium appointments throughout hint at levels of luxury rarely seen in this grade of vehicle, while impressive infotainment options help put the world at your fingertips.

Exterior

The latest Tiguan extends the appeal of Volkswagen's latest brand architecture with a vehicle that is at once stylish and commanding.

The model exudes strength and solidity thanks to its balanced proportions and long wheelbase. Its low profile also gives it a crouched, sporty look that is only enhanced by its sleek lines and well-proportioned curves. This is a vehicle that is rugged and elegant in equal measure.

The Tiguan presents a confident face to oncoming traffic, with angled headlights and LED daytime driving lights with integrated chrome strips (in the Comfortline and Highline) sitting below a high bonnet complete with V-shaped character lines. Side and central air inlets with honeycomb pattern are distinctive elements that add to the appeal of the Tiguan's façade.

In profile, the Tiguan's angular look is aided by a striking shoulder line with integrated door handles. In Comfortline and Highline trim, the addition of a chrome finish to the window frames, lower body strip and roof rails gives the Tiguan a premium look.

From behind, the eye is immediately drawn to the Tiguan's large rear window and the continuation of the side shoulder line through the tailgate. LED tail lights are a feature across the entire range, as is the protruding diffuser with integrated parking sensors. Trapezoidal exhausts left and right on the 162TSI Highline give it a purposeful appearance.

Select the optional R-Line package on the Highline variant and the Tiguan receives a thorough sports styling transformation complete with R-Line bumpers, side sills, rear roof spoiler and exclusive R-Line badging.

A variety of appealing alloy wheels help set the Tiguan apart from its competitors. Among those available are 17-inch Montana (Trendline) wheels, 18-inch Kingston (Comfortline) wheels, through to the 19-inch Auckland wheels (Highline) and an imposing 20-inch Suzuka wheels as part of the optional R-Line package.

- 01 Montana 17" alloy wheel (110TSI Trendline)
- 02 Kingston 18" alloy wheel (110TSI & 132TSI Comfortline)
- 03 Auckland 19" alloy wheel (162TSI Highline)
- 04 Suzuka 20" alloy wheel (Optional R-Line Package)

Interior

The Tiguan wouldn't be a Volkswagen if it didn't convey a sense of refined comfort with every touch.

The dashboard itself is the epitome of clean and functional design, with everything the driver needs readily at hand. The cockpit has been designed to make the driver feel in charge and completely at one with the vehicle. A high-positioned gearshift and leather multi-function steering wheel with gearshift paddles (in the Highline) are just two examples of Volkswagen's focus on driver enjoyment.

Just because the cabin is practical doesn't mean it loses in terms of visual appeal. Decorative inserts in the dashboard and extending through to the rear are reminders that the Tiguan has been designed to look good as well as function perfectly.

Infotainment is front and centre with a high resolution 8 inch Composition Media screen (Trendline only), Discover Media with Satellite Navigation (Comfortline only) and Discover Pro 9.2 inch (Highline only) infotainment system complete with smartphone glass appearance and clever App-Connect~ technology. Your phone connects via a USB interface, putting selected apps on your Apple® or Android™ smartphone device immediately at your fingertips. There are two USB ports available at the front for App-Connect~ and one in the rear for charging. Passengers can now also use the Tiguan's Media Control technology to select music and more via their smartphone or tablet.

A key feature of the Tiguan's interior is undoubtedly its generous luggage capacity. At 615 litres with the seats up (and in the forward position), and expandable to 1655L with the seats folded, there is no need to worry about loading that extra suitcase or box of groceries. A low loading sill makes for easy use of the boot space, as does a luggage compartment floor that can be adjusted to two different heights.

If exceptional space weren't enough, the Tiguan has been designed to be as practical as possible. Front seat backrest-mounted tables in the Comfortline and Highline are a versatile feature in as is the dashboard compartment for easy storage of sunglasses and other small items.

01 Direct Shift Gearbox (DSG)

02 Frameless rear view mirror

03 Discover Pro 9.2" infotainment system with Satellite Navigation

04 Luggage Capacity

~App-Connect is compatible for selected apps with the latest smartphone versions of iOS and Android, active data service, and connection cable (sold separately).

Performance

Three TSI petrol engines are available in the Tiguan, each tailored to suit different driving demands.

The entry-level 1.4-litre 110kW TSI engine is economical and sprightly. Volkswagen's 2.0 litre 132kW TSI engine (available in the Comfortline) is for those drivers who want added performance, while the Highline's top spec 2.0-litre 162kW TSI offers a premium driving experience with even more outstanding power and torque delivery.

Available on the 132TSI Comfortline and Highline variants is Volkswagen's 7-speed DSG transmission and 4MOTION technology.

For added confidence in challenging driving conditions, you can't go past Volkswagen's 4MOTION all-wheel drive system with Active Control.

Active Control allows the driver to tailor his or her driving experience by choosing one of four special all-wheel drive modes (snow, on-road, and two off-road settings: one automatic and one variable) via a rotary switch. A central mode button activates the Driving Profile Selection, which offers further personalisation of the on-road mode with Normal, Sport and Eco profiles available to the driver.

The Tiguan Highline receives innovative Adaptive Chassis Control, which constantly adjusts the suspension to the road conditions and driving situation via electrically controlled dampers. The driver can select from one of three different ride settings – Normal, Sport and Comfort – to alter the Tiguan's damping characteristics.

01 4Motion Active Control (132TSI Comfortline and Highline only)

Technology and Safety

The Tiguan offers a unique and extensive range of intelligent technology which makes an efficient and pleasurable drive, whilst also providing peace of mind through its safety features.

Among the advanced driver assistance systems included as standard are Front Assist with City Emergency Brake* (City EB) and Pedestrian Monitoring* functions, which use a radar sensor to help avoid or mitigate an impact with a vehicle or pedestrian in front of the vehicle. Another safety feature is Lane Assist* with Adaptive Lane Guidance, which helps keep your Tiguan on track by detecting if the vehicle is straying from its intended course and gently counter-steering it back into the lane.

Parking in a cinch with Park Assist*, which uses a Rear View Camera* and sensors front and rear to identify spaces and guide drivers into and out of them automatically.

Additional standard inclusions are Driver Fatigue Detection* which monitors driver behaviour to identify signs of fatigue and provides the driver a visual and audible signal when it's time to take a break, and clever Multi-collision Brake technology, which automatically initiates braking after a collision to prevent or minimise the severity of subsequent collisions.

Volkswagen's Driver Assistance package (optional on Comfortline and standard on Highline) provides the driver extra peace of mind with a suite of advanced features to assist day-to-day driving. Adaptive Cruise Control (ACC)*, Traffic Jam Assist* and Side assist** with Rear Traffic Alert* are all exceedingly helpful in busy traffic situations, while Emergency Assist* acts to bring your Tiguan to an emergency stop in the unlikely event that the driver is incapacitated.

Optional as part of the Sound and Vision package is 360-degree Area View*, which uses strategically placed cameras to provide a bird's eye view of the area around your vehicle. In addition, the high-resolution Active Info Display behind the steering wheel puts everything you need right in front of you, including driver assistance and vehicle functions.

01 Side Assist**^

02 Front Assist with City Emergency Brake (City EB)*

^Side Assist is available on the Highline variant only.

*Safety technologies are designed to assist the driver, but should not be used as a substitute for safe driving practices

Highlights

An impressive amount of technology has been added to the Tiguan that, in combination with a number of comfort aids, help maximise levels of driver enjoyment.

Standard in Comfortline and Highline variants, the automatically operated tailgate allows for fuss-free opening and closing of the rear door. With the Easy Open function, the tailgate can be opened simply by swiping a foot in front of a sensor, making it enormously convenient when carrying a load of shopping. Closing the tailgate is as easy as pressing a button or kicking to close.

Elsewhere around the Comfortline and Highline variants, full LED headlights with Dynamic Cornering lights offer exceptional illumination of the road ahead and when turning.

Great care has been taken to improve driver and passenger comfort, which is why the Tiguan features a generation of seats with updated foam contours and on Highline models electrically adjustable front seats with memory. Choose the Highline variant and feel the difference offered by Black Vienna leather appointed upholstery#.

Driver and passengers can choose the temperature that suits them courtesy of Air Care 3 Zone Climate Control Air-conditioning (Comfortline and Highline). Up to three different temperatures and air volumes can be selected (for driver, front passenger and rear cabin) with the added benefit of an air quality sensor and anti allergen filter to maintain optimum air quality.

For the ultimate fit-out of your Tiguan Highline, the optional R-Line package offers a suite of features such as R-Line body styling, R-Line interior, 20-inch Suzuka alloys wheels and progressive steering.

Colours & Upholstery

Tiguan seats offer new levels of comfort and lateral support, and come in one of three upholstery grades. The Trendline features Black Cloth, while the Comfortline comes with Black Comfort Cloth as standard. The Highline features Storm Grey Vienna leather appointed upholstery[#] (only available in Highline models) or Black Vienna leather appointed upholstery[#] (also optional with the Comfortline in the Luxury Package) for the highest level of driver comfort and luxury.

In terms of exterior paint, the Tiguan comes in a variety of appealing colours, with Metallic and Pearl Effect available at an optional extra cost. Choose Pure White as a solid paint finish, or make a statement with one of a range of metallic finishes, including Atlantic Blue Metallic⁺, Ruby Red⁺, Tungsten Silver and Indium Grey. Deep Black comes in Pearl Effect paint finish for an added twist of exclusivity.

Please note that Metallic and Pearl Effect paint are optional at extra cost. The print process does not allow for exact reproduction of the exterior or the upholstery colours. Please contact your Volkswagen Dealer for further information on colours and upholstery combinations.

Items such as sports equipment and tablets are shown for illustration purposes only and are not available for purchase from Volkswagen Group Australia or its Dealers. For a full range of Volkswagen Genuine Accessories, please refer to www.volkswagen.com.au or visit an authorised Volkswagen Dealer.

Peace of Mind

5 years Unlimited Kilometre Warranty

At Volkswagen, we pride ourselves on the highest quality standards that come with German engineering.

We back this commitment with a 5 year unlimited kilometre warranty on all new Volkswagen vehicles*.

1 year Roadside Assist

Every new Volkswagen comes with a 1 year Roadside Assist membership^.

That's 24 hour roadside assistance, emergency accommodation, car rental and towing as well as property and other assistance, all included for added peace of mind.

Volkswagen Care Plans

Volkswagen Care Plans† have you covered for your first 3 or 5 scheduled services, providing you significant savings off the total Assured Service Pricing RRP. It's convenient, hassle-free scheduled servicing easily available for purchase at your local Volkswagen Dealer.

Assured Service Pricing

Assured Service Pricing# gives you the transparency of knowing how much your service will cost up front.

Our Volkswagen Dealers have access to the latest diagnostic equipment and tools. Plus, they use Volkswagen Genuine Parts® to ensure your Volkswagen stays a Volkswagen.

You're in safe hands at your Volkswagen Dealer when it comes to servicing.

*Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/warranty.html>. Your rights under this warranty are provided in addition to, and in some cases overlap with, consumer guarantees under the Australian Consumer Law and do not limit or replace them.

^Volkswagen Roadside Assist is provided by AWP Australia Pty Ltd ABN 52 097 227 177 trading as Allianz Global Assistance, under an arrangement with Volkswagen Group Australia Pty Limited ABN 14 093 117 876. Conditions and exclusions apply, see <https://www.volkswagen.com.au/en/owners/roadside-assist.html>.

†Volkswagen Care Plans are available at participating Volkswagen Dealers for all models and covers standard items as contained in each scheduled service interval only. These Care Plans can only be purchased prior to the first scheduled service and up to 22,500 km/15 months (whichever occurs first) for all models except Volkswagen Crafter models, which is 30,000 km/15 months (whichever occurs first). The timeframe takes effect from when the vehicle is first reported in our system as 'sold'. Discount structure varies by model. For details of what is not included in a scheduled service, please refer to the program terms and conditions available here: http://volkswagen.com.au/content/dam/vw-ngw/vw_pkw/importers/au/pages/aftersales/care-plans.pdf

#Assured Service Pricing applies to the first 5 standard scheduled services of your vehicle which are scheduled to occur at every 15,000 km/12 month interval (whichever occurs first) or for Volkswagen Crafter models only, 20,000 km/12 month interval (whichever occurs first). On or before 31 December each year, Volkswagen will publish the maximum price for a specified Scheduled Service that will be applicable from, and remain fixed for, the following calendar year only. For details on the Eligible Model List, pricing, items not included and for full terms and conditions, please see <https://au.volkswagen.com.au/service-pricing-guide>.

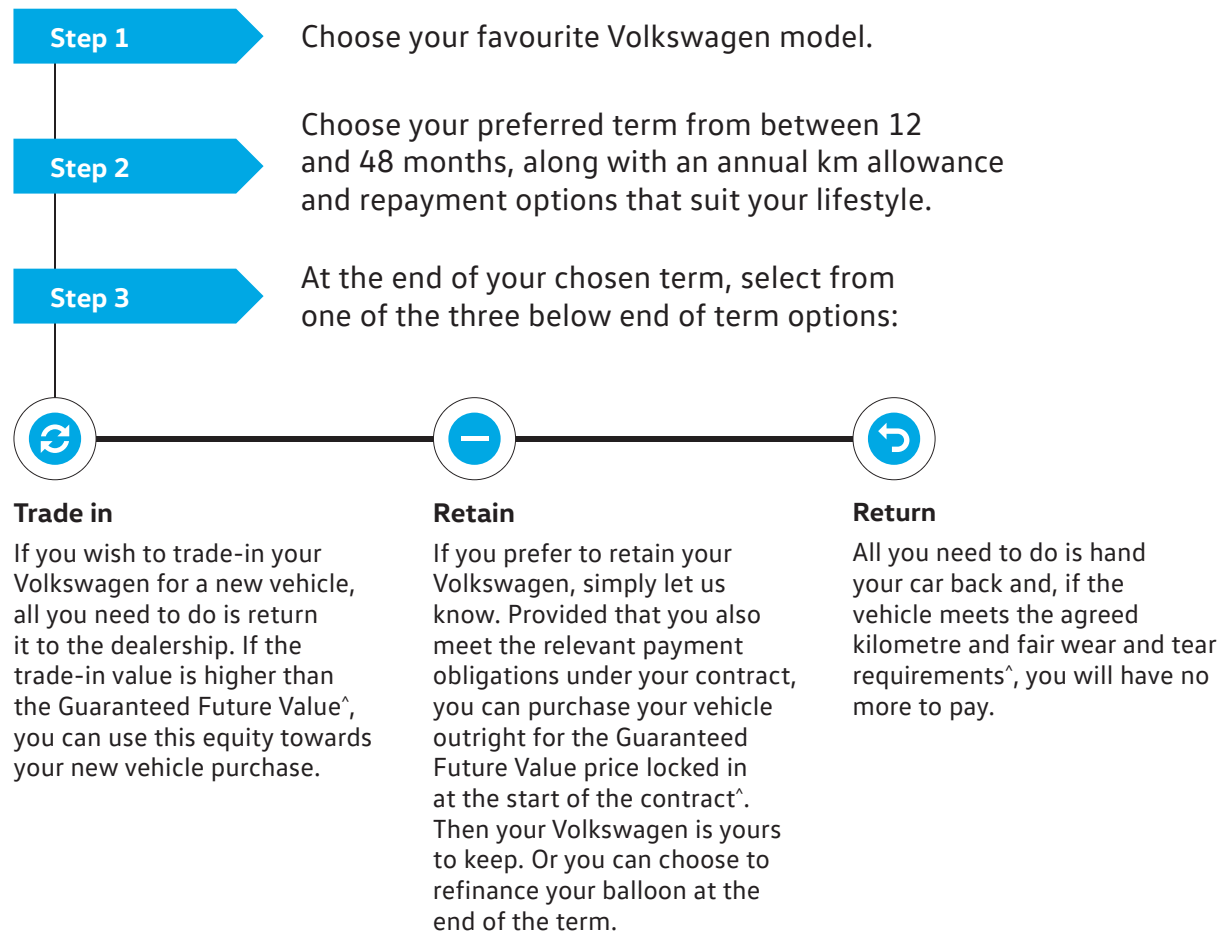

Volkswagen Choice

Volkswagen Choice

Guaranteed Future Value

Naturally we understand that your Volkswagen represents a valuable investment, so we understand that you want to maintain it in premium condition. Volkswagen Choice[^] is a finance program tailored to the requirements of Volkswagen owners by providing assurance around your Volkswagen's future value[^], whilst offering simple monthly instalment financing options.

Whether you are selecting your new Volkswagen for business or personal use, you can choose the contract term that best suits your requirements. Enjoy the confidence that comes from having locked in a minimum value up front to be attributed to your vehicle at the end of your contract[^]. There are also no account keeping fees with a fixed interest rate.

[^]The Volkswagen Choice Program consists of an option to return the vehicle to Volkswagen Financial Services (VFS)** at the end of the term and require VFS to purchase the vehicle at price known as the Guaranteed Future Value (GFV) as determined by VFS. At the end of the term, you can elect to: (1) trade-in the vehicle; (2) exercise the option to return the vehicle; or (3) retain the vehicle by paying the GFV, which is a lump sum owed to VFS at the end of the loan term after all repayments have been made. You will be liable for any loan contract deficit and additional charges, if you exceed the nominated kilometre allowance and/or the vehicle is not in an acceptable condition. Available on new and demonstrator Volkswagen vehicles for selected models. Contact your nearest Volkswagen dealer to verify eligible vehicles for this program. Fleet, government, rental buyers, hire car and chauffeur companies excluded.

**VFS is trading name of Volkswagen Financial Services Pty Ltd ABN 20 097 071 460, Australian Credit Licence 389344.

Glossary

4MOTION all-wheel drive

An all wheel drive system that provides the best possible traction at all road speeds, in all weather and road conditions. An electronically controlled multi-plate clutch directs torque to the axle with the best traction.

When operating under a relatively low load or when coasting, power is primarily distributed to the front axle, thus saving fuel. However, the rear axle can be variably engaged in fractions of a second whenever necessary, even before any wheel starts to slip and therefore reducing the potential for a loss of traction. The wheels of the Tiguan are prevented from spinning even when driving off and accelerating.

Activation of the multi-plate clutch is based primarily on the engine torque demanded by the driver. In parallel, a system within the all-wheel drive control unit evaluates such parameters as wheel speeds and steering angle.

Adaptive Chassis Control*

The electrically controlled dampers of adaptive chassis control constantly adjust to the road conditions, the driving situation and driver's requirements. Selected via and integrated within the functionality of the Driving Profile Selection, the driver can choose between three damper settings – Normal, Comfort and Sport.

Starting from the normal setting, the driver can change the basic character of the car towards sporty or more comfort-oriented driving. In each setting, the adaptive chassis control adjusts the damping to the particular driving situation (up to one thousand times per second) which means it offers an optimum level of driving comfort and enjoyment at all times. Particularly on windy roads and poor surfaces, using adaptive chassis control offers sporty and yet comfortable driving.

Adaptive Cruise Control (ACC)*

Adaptive Cruise Control (ACC) is an extension of the conventional cruise control system with advanced capabilities based on a radar sensor. When ACC is activated, the vehicle automatically brakes and accelerates to a speed and distance set by the driver.

If the Tiguan approaches a slower vehicle, the ACC brakes the car to the same speed and maintains the pre-selected distance. Even when a vehicle pulls into the same lane in front of you or slows, your vehicle is automatically decelerated to the pre-selected distance. If the vehicle ahead moves out of your lane, the Tiguan then accelerates up to the pre-set desired speed.

Deceleration of the vehicle may take place via intervention in the engine management system. If deceleration via engine torque is not sufficient, brake intervention takes place, braking the vehicle to a standstill if the traffic situation necessitates in vehicles equipped with a DSG transmission. ACC can be reactivated automatically by depressing the accelerator pedal.

The dynamics of the ACC system can be individually varied by selecting one of the driving programs from the driver profile selector.

Adaptive Cruise Control (ACC) cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain.

Anti-lock Braking System (ABS)

When braking, wheel speed sensors measure the road wheel speed and should one or more wheels start to lock the ABS system reduces brake pressure to that wheel. This prevents the wheels from locking during heavy or emergency braking, enabling the vehicle to remain steerable.

Anti-Slip Regulation (ASR)

ASR is a traction control system that prevents the wheels from spinning under acceleration by reducing engine torque.

Auto Hold function

As soon as the vehicle comes to a complete stop, the ABS hydraulic unit stores the vehicle's final braking pressure. So even when you take your foot off the brake pedal, all four wheels' brakes remain applied, providing increased comfort in stationary traffic. This function is released automatically when you drive off again.

Brake Assist

During emergency braking, Brake Assist aids the driver by increasing the brake pressure automatically to a level exceeding the locking limit. The ABS is thus quickly brought into the operating range, which enables maximum vehicle deceleration to be achieved.

Direct Shift Gearbox (DSG)

DSG is a manual gearbox in which the gearshifts are controlled electronically. What makes the DSG unique is that it has 2 separate gear sets operated by 2 clutches.

The benefit of 2 gear sets and 2 clutches is that one gear set and clutch is engaged driving the vehicle with the second disengaged clutch having already pre-selected the next gear awaiting for power to be transferred. As the next gear has already been pre-selected prior to power being applied, the gear change only takes 3-4 100ths of a second. There is virtually no interruption to power, traction or acceleration.

The DSG also offers Tiptronic gear selection and sports mode.

Driving Profile Selection with 4MOTION Active Control

Driving profile selection provides the driver with a wide-ranging choice of settings that can be made to the vehicle according to the driver's preferences. The driver has the option of choosing between the following driving profiles: Normal, Sport, Eco, Comfort (with optional R-Line) and Individual. The Normal profile offers a comfortable but dynamic driving style. Sport provides faster response of the accelerator pedal, sportier damping and steering, while the DSG switches to Sport mode. Eco mode has been designed to enhance fuel efficiency by including coasting function and by adapting engine performance, earlier gearshift points and consumption-optimised control of the air conditioning system. Comfort mode offers a more relaxed and comfortable driving experience, primarily through the softer suspension setting of the adaptive chassis control. The Individual setting allows the driver to separately set various parameters including steering, engine, Adaptive Cruise Control (ACC) and air conditioning.

4MOTION Active Control provides for the convenient selection of on-road and off-road driving profiles for model equipped with 4MOTION by means of a rotary dial. Rotating the dial selects one of four special all-wheel drive modes: Snow, On-road, Off-road (automatic configuration of the off-road parameters) and Off-road individual (variable settings).

Glossary

Emergency Assist*

Emergency Assist monitors the driving characteristics and recognises, within the limits of the system, if the driver suddenly becomes incapable of driving (due to the vehicle not being controlled).

Emergency Assist detects a lack of activity on the part of the driver and issues repeated visual and acoustic warnings and initiates a quick jolt of the brakes to request the driver to take control of the vehicle.

If the driver remains inactive, the system automatically controls acceleration, braking and steering to slow the vehicle down and keep it in the lane. If there is sufficient stopping distance, the system decelerates the vehicle to a complete stop and switches on the electronic parking brake automatically.

When Emergency Assist is actively controlling the vehicle, the hazard warning lights are switched on and the vehicle performs a slight snaking motion within its lane to warn other road users. Ideally this will prevent a collision, or at least reduce its severity.

Emergency Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Emergency Assist utilises both the Adaptive Cruise Control (ACC) and Lane Assist driver assistance systems. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the driven wheel/s on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Fatigue Detection

The driver Fatigue Detection system automatically analyses the driving characteristics and if they indicate possible fatigue, recommends that the driver takes a break. The system continually evaluates steering wheel movements along with other signals in the vehicle on motorways and others roads at speeds in excess of 60 km/h, and calculates a fatigue estimate. If fatigue is detected, the driver is warned by information in the Multi-function Display and an acoustic signal. The warning is repeated after 15 minutes if the driver has not taken a break.

Fatigue Detection cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore determining whether or not they are fit to drive. A driving time of 15 minutes is required in order to assess the driver correctly. The functionality of the system is restricted given a sporty driving style, winding roads and poor road surfaces.

Electronic Brake-pressure Distribution (EBD)

Electronic, more sophisticated means of regulating the ratio of front/rear brake pressure. Settings are varied according to driving and load conditions to ensure each wheel is braked to the optimum extent

Electronic Differential Lock (EDL)

EDL improves driving and steering characteristics when accelerating on road surfaces where each wheel has a different degree of traction. The system operates automatically and is combined with the ABS system. Using the ABS wheel sensors, EDL monitors the speed of the individual driving wheels. When a difference in driving wheel speed is detected (i.e. when one wheel starts to spin due to differences in road surfaces, e.g. due to water or dirt) the system brakes the spinning wheel, transferring engine power to the wheel with the best traction.

Electronic Stabilisation Program (ESP)

ABS and ASR traction control systems are integrated into the Electronic Stabilisation Program (ESP). In short, ESP helps ensure that the vehicle goes where you steer it even in extreme driving conditions. The ESP system constantly compares the actual movement of the vehicle with pre-determined values and should a situation arise where the vehicle starts to skid, ESP will apply the brakes to individual wheels and automatically adjust the engine's power output to correct the problem. ESP prevents the vehicle from losing control when trying to avoid an accident, for example. It also reduces the effects of understeer or oversteer.

Extended Electronic Differential Lock (XDL)

XDL is an extension of the Electronic Differential Lock (EDL) function. When cornering, XDL responds to the load relief at the driven wheel/s on the inside of a corner. The ESP hydraulics are used for the XDL to apply pressure to the wheel on the inside of the corner in order to prevent wheel spin. This improves traction and reduces the tendency to understeer. As a direct result of the one-sided and precise braking pressure, cornering is sportier and more accurate.

Front Assist with City Emergency Brake (City EB) and Pedestrian Monitoring functions

The Front Assist ambient traffic monitoring system uses a radar sensor to detect critical distance situations and thus help to shorten the braking distance, reducing the risk of a rear-end collision.

The traffic ahead is monitored constantly by the radar at the front. If a vehicle is detected ahead of you in the lane, the distance and the speed relative to it are calculated. If the gap is closing too fast, Front Assist initially warns the driver by means of an audible as well as a visual signal. At the same time, the brake pads are brought into contact with the brake discs and the sensitivity of the Brake Assist is increased. This primes the braking system for a possible emergency stop. Furthermore, an automatic jolt of the brakes warns the driver of the danger. If the driver also fails to react to the warning jolt, Front Assist brakes automatically, helping to avoid a collision or reduce the severity of the accident.

The City Emergency Brake (City EB) function is a radar based emergency braking system designed to help a driver avoid a low-speed crash or to reduce its severity. At vehicle speeds below 30km/h, City EB monitors the area ahead of the car for vehicles which might present a threat of collision. If a collision is likely, City Emergency Braking first pre-charges the brakes and makes the emergency Brake Assist system more sensitive: if the driver should notice the risk, the car is ready to respond more quickly to their braking action. However, if the driver still takes no action and a collision becomes imminent, City Emergency Braking independently applies the brakes very hard. If the driver intervenes to try to avoid the accident, either by accelerating hard or by steering, City EB will deactivate and allow the driver to complete the avoidance manoeuvre.

Pedestrian Monitoring is an extension of the Front Assist monitoring system featuring the City Emergency Brake. The system uses a radar sensor in the radiator grille to monitor the area in front of the vehicle and within the limits of the system, register certain situations, for example a pedestrian stepping onto the road suddenly. The system then gives an immediate acoustic and visual signal to warn the driver. If the driver does not brake, the system initiates a jolt of the brake as a warning about the critical situation, while at the same time preparing for hard braking. If the driver fails to react, the system automatically performs emergency braking, within system limits. Ideally this will prevent a collision, or at least reduce its severity.

Front Assist with City Emergency Brake (City EB) and Pedestrian Monitoring cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Glossary

Lane Assist

Lane Assist is a lane departure warning system that is designed to help reduce the likelihood of the vehicle leaving the road or crossing into an oncoming lane and therefore the risk of accident as a result of driver distraction or a lapse in concentration.

The Lane Assist system monitors the road ahead with the aid of a camera (located near the interior rear-view mirror) which recognises lane markings and evaluates the position of the vehicle. If the vehicle starts to leave the lane, the Lane Assist system takes corrective steering action. If this is not sufficient the driver is warned about the situation by a steering vibration and is asked to take over the steering. Additionally, if no active steering movements by the driver are recognised for longer than approximately 8 seconds, a message will appear in the Multi-Function Display in conjunction with a warning tone. The corrective steering function can be overridden by the driver at any time and the system does not react if the turn indicator is set before crossing a lane marking.

When **adaptive lane guidance** is active and the system detects both lane markings to the left and right of the vehicle, the function provides permanent assistance while the vehicle is in motion. The system adopts the preferred position within the lane in which the vehicle is travelling. For example, if the vehicle is being driven slightly off-centre in the lane, the system will learn to adopt the new position within a short period of time.

Lane Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and therefore staying in the lane at all times. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system. The Lane Assist system does not activate at a vehicle speed of less than 65km/h.

Manoeuvre braking

Manoeuvre braking assists the driver to avoid or reduce damage in a potential collision by initiating emergency braking. It supports the driver during forward and reverse manoeuvring in a speed range of a maximum 10 km/h. If the risk for an accident is recognised, emergency braking is initiated to minimise possible damage.

Manoeuvre braking cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. The object must be detected by the sensors. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged they need to react accordingly and stop the vehicle.

Multi-collision brake

The multi-collision brake has been designed to provide effective assistance for the driver in the moments after an accident. Multi-collision brake triggers automatic controlled braking once an initial collision has been detected so as to reduce the intensity of further accidents after a collision and can help prevent follow-on collisions with oncoming traffic.

The triggering of the multi-collision brake is based on a collision being detected by the airbag sensors. The ESP control unit limits the deceleration of the vehicle by the multi-collision brake to a defined value and vehicle speed. The vehicle can still be controlled by the driver, even when automatic braking is taking place. The driver can interrupt the multi-collision braking at any time by accelerating or braking even more strongly.

Park Assist

The third generation Park Assist system actively helps the driver when entering or reversing into 90° parking bays, as well as reversing into and driving out of parallel parking spaces. The system works by using

sensors mounted either side of the front and rear bumpers together with parking distance sensors front and rear. To park, the driver simply presses the Park Assist button to select the type of parking manoeuvre and uses the appropriate indicator as the car slowly passes the potential parking space. Sensors scan the size of the parking space as the car is driven past and the driver is alerted if the parking space is big enough. If there is sufficient space, the driver stops the car, selects the correct gear and lets go of the steering wheel.

Park Assist will alert the driver of the intended path and subsequently the appearance of obstacles in the Multi-Function Display, within the driver's field of vision. Park Assist then actively supports the driver by taking over the steering control and parks the vehicle in the available space using the ideal course, if necessary with several moves. The driver can however take over the control of the steering at any time and end the automatic parking procedure.

Park Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle. If the driver notices a risk that pedestrians, other vehicles or objects could be damaged or if they are uncertain of the risk, they will need to react accordingly and stop the vehicle, ending the function.

Side Assist with Rear Traffic Alert*

Side Assist, is a lane change assistant that detects vehicles on the right and left hand side of the lane, in the blind spot and those vehicles coming nearer behind. The system informs with a warning light in the exterior mirror whenever a detected vehicle is close and a lane change would be dangerous. If the driver sets the indicator, the warning light begins to flash. Rear Traffic Alert warns the driver of approaching traffic at the rear of the car when reversing via an audible warning followed by a visual message in the Optical Parking System (OPS).

Side Assist also works in conjunction with the Lane Assist system. If another vehicle is in the blind spot during a lane change, the dual assist system warns the driver by means of flashing LEDs in the right-hand or left-hand exterior mirror and by vibrations on the steering wheel. It also supports the driver by means of a corrective steering intervention. This procedure occurs regardless of the state of the turn indicators.

Side Assist with Rear Traffic Alert cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles.

Traffic Jam Assist*

In congested traffic situations, Traffic Jam Assist makes driving significantly more comfortable and helps to avoid typical rear-end collision accidents. The Traffic Jam Assist function combines the driver assistance systems Adaptive Cruise Control (ACC) and Lane Assist with adaptive lane guidance.

In a speed range of 0-60km/h, the system automatically controls acceleration, braking, steering and if required, will decelerate to a stop behind a vehicle that is stopping.

Traffic Jam Assist cannot replace the driver's attentiveness. The driver is still legally responsible for the vehicle and must monitor the speed and distance in relation to other vehicles. Traffic Jam Assist has been developed for use only on motorways. The ACC system should not be used on winding roads or in adverse weather conditions such as heavy rain. The system will not work if there are no recognisable lane markings. The camera vision can be reduced by rain, snow, heavy spray or oncoming lights. This and vehicles in front of you can lead to the lane markings not being recognised by the Lane Assist system.
