ALL-NEW 2003 EXPEDITION

EXTEND
YOUR
RANGE

OF VERSATILITY

While other SUV makers brag about their removable seats, the all-new Ford Expedition doesn't require you to remove a thing – and still seats up to nine. The **third-row 60/40 split bench seat folds flat** right into the floor. No lifting required. **Add the power-fold option**, a segment first, and the third-row seats fold automatically – at the touch of a button.

The unique **40/20/40 split second-row bench** includes a slide-forward center section. To keep baby within arm's reach, just pull the lever forward and the seat moves 10.7 inches for easy access.

With the second- and third-row seats folded down, Expedition provides **best-in-class cargo volume** as measured without removing any seats.

EXTEND
YOUR
RANGE

OF DRIVING
CONTROL

The all-new 2003 Ford Expedition truly delivers on the promise of control.

Expedition is the only full-size SUV with a fully **independent rear suspension**. The system tracks uneven pavement or terrain for improved ride comfort and control.

The available **AdvanceTrac™ electronic stability enhancement system** monitors traction at all wheels. When active, this system automatically enhances stability while maneuvering on varied driving surfaces.

And the available **5.4L V8 engine** is quieter than ever and gives Expedition a class-leading 8900 lbs. of towing capacity (when properly equipped).

EXTEND YOUR RANGE OF SAFETY

The original Expedition was the only full-size SUV to earn a double 5-star government crash rating. As the full-size safety leader, the all-new 2003 Expedition builds on this heritage. At the core: **Ford's Personal Safety System™**. It quickly estimates accident severity and certain occupant conditions, then manages the front safety belts' tension and slack and front airbag deployment energy levels to provide improved protection for occupants.

Expedition is the only full-size SUV with the integrated **Safety Canopy™ System**. This available system uses advanced sensors to deploy a side air curtain in certain side-impact collisions or rollover events. The airbag stays inflated for a longer duration, providing enhanced head and shoulder protection and helping to keep occupants in the vehicle.

And Expedition is **designed for compatibility** with the height of passenger car bumpers.
