

LTD

*Australia's most exclusive
luxury car.*

LTD

There aren't too many to go around.

The new LTD, like its predecessors, is a most distinctive car. The number Ford make is very few, and the standards set in building them are very high. The quality, the care, the skilled craftsmanship involved is evident in the finished car. And this all takes a bit of extra time.

The Ford LTD is truly Australia's most exclusive luxury car.

Technology meets craftsmanship.

The latest LTD brings together these ingredients in a very refined manner.

The information you need is there at a glance.

The feather touch instrumentation is ergonomically designed to be within easy reach. In fact, the most frequently used switches can be operated without taking your hands away from the wheel.

A detailed photograph of the interior of a Lincoln LTD. The car features dark leather upholstery on the front and rear seats, which have horizontal stitching. The dashboard is dark with a digital display and analog gauges. The center console has a gear shifter and handbrake. The door panels are also dark with leather accents. The overall lighting is soft, highlighting the textures of the leather and the design of the interior components.

LTD

A new standard of luxury.

The LTD is built to a standard of interior luxury that any manufacturer would be proud of.

Comfort for both driver and passengers is of a style that makes driving a pleasure to look forward to.

The picture tells the story.

From the high fidelity sound system, to the power window and door locks.

From the power operated front seats, to the electrically operated exterior rear-view mirrors.

Everything you see is standard.

*The LTD is under
new management.*

Comfort and luxury are not the only criteria set for the LTD. Engineering excellence and superb performance are also important standards.

So, to the smooth and powerful 4.1 litre Electronic Fuel Injected engine we have added the EEC 4—Ford's fourth generation Electronic Engine Control on-board computer.

The computer monitors and controls many of the engine's vital functions in a way that has not only increased performance but has also improved LTD's fuel economy.

It's a difference you can feel. The car responds smoothly and instantly.

How it does it is relatively simple.

The EEC 4 has sensors on various parts of the engine. These sensors tell the computer everything it needs to know to adjust the air/fuel mixture and the spark timing to achieve the designed level of performance.

Every spark on every stroke of the piston is adjusted to the driving conditions (accelerating, cruising, decelerating or idling). The fuel-air mixture is also adjusted at the same time.

The result is better fuel economy because you use only the required amount of fuel to match the driving conditions. And you get better performance because each piston stroke delivers improved power.
